Overview

Problems facing financial institutions:

- Federal regulatory agencies are constantly changing and adding reporting requirements
- Management, employees, customers, and business partners' demand for information places an increasing workload on IT departments
- Need to maintain and expand current client base by finding new cross-selling opportunities
- Get a better understanding of customer's needs, behaviors and preferences
- Competition for new customers is greater now than ever before, adjustments need to be made quickly to market changes
- Executives need to have a better understanding of what is occurring within the organization
- Mergers and acquisitions require data to be combined from several different sources

The UltraQuest Web based reporting and data extraction tool can help with all of these problems.

How can UltraQuest help:

- Assist the IT department in keeping up with demand, while lowering costs
- Allow end users to become self sufficient
- A lower cost solution compared to other products on the market today
- No need to move the data; efficient up to the minute access to information
- Users can easily access information utilizing a simple web browser
- Multiple layers of security protect data from unauthorized access
- Extensive logging keeps track of who did what and when
- Numerous built-in financial functions
- Extensive reporting capabilities in support of Operational, Tactical and Strategic analysis
- Output can be delivered in a variety of ways:
 - Chart/HTML/Text to a Web browser, email, stored for later viewing, or S/390 printer
 - Data in the form of a delimited file, database, XML file, or Web service
