

UltraQuest VSAM Interface

Benefits

- Full-featured reporting and analysis
- Centralized Data Definition Control
- Effective mapping of VSAM structures
- Automatic Data Synchronization
- Control of the data down to the field level
- Efficient data retrieval
- Access to multiple data sources
- Support for VSAM alternate indexes

Overview

The UltraQuest VSAM Interface is a powerful tool for unlocking the information held in VSAM/QSAM datasets. The VSAM Interface delivers the resource control, security and seamless access to multiple data sources needed for their productive use of VSAM data.

UltraQuest's interfaces to other mainframe data sources, such as DB2, IMS, IDMS, and Teradata databases, make it easy to link information from multiple sources with VSAM data. Users have a consistent view of the data because UltraQuest's retrieval and analysis commands operate identically on all supported file types with no special sub-environments to access.

Interface Facilities

VSAM Structures

UltraQuest maps VSAM record structures such as repeating groups, multiple record types, redefines into hierarchies and arrays, allowing them to be used effectively and efficiently.

Centralized Data Definition Control

The Schema, UltraQuest's internal data dictionary, adds data validation checks, security constraints, null values, headings, display formats, documentation, and extensive calculations to enhance the VSAM data. A mapping utility pre-populates the Schema based on existing copybook information.

Automatic Data Synchronization

UltraQuest protects the integrity of your data by checking the UltraQuest definition against the definition of the file you are accessing (IMS, DB2, etc.) and denies access if there is a mismatch.

Important Security Features

Complete control of the data down to the item level is provided which can be combined with any in-house security packages.

Resource Efficiency Facilities

The VSAM Interface has several facilities for improving the efficiency of data retrieval including automatic use of keys for screening records retrieved.
