P E R S P E C T I V E

The only Software Development Process Built for CBD (Component-Based Development) from the Ground Up

Continually evolving and proven, on hundreds of significant Business IT projects around the globe, *Select Perspective™* is Iterative, Incremental and Adaptive. *Select Perspective* gives you:

- *Business Driven IT solutions*
- *Full life-cycle coverage*
- *Component and Service-Based Design (CBDesign) and Development*
- *Service Oriented Architecture*
- *Unified Modeling Language (UML), Business Process Modeling and Data Modeling*
- *Legacy System integration*
- *Package integration*
- *Business, Technical and Data Architecture*
- *Component Selection and Acquisition*
- *Techniques Mentoring*
- *Role and Responsibility Definitions*
- *Links to RUP, DSDM, OMG's MDA and TMap*
- *Parallel Distributed Development*

HOW DO YOU KEEP UP?

In the world of Business IT, technology is changing so fast that it's hard to keep up. Software development tools and architectures are improving all the time but how can you manage development projects in this constantly changing environment? How can you take advantage of componentization, XML, web services, Java, .NET and the myriad of other great new facilities and architectures, when you have no real experience to fall back on?

USE THE EXPERIENCE OF OTHERS

Select Perspective, from Select Business Solutions™, is a set of best practices for software development, which have evolved over the last 10 years to become the foremost component-based design and development (CBD) process. Our consultants are actively involved in hundreds of successful CBD and service-based projects every year, and their experience is used to keep the **Select Perspective** at the leading edge. Nowhere else can you get such up to date software development practices.

COMPLETE YET ADAPTIVE

The **Select Perspective**, in its latest iteration, comprises some 29 person years of documentation. With 274 processes, 102 techniques, 69 roles, 39 software tools and 138 deliverables defined, the **Select Perspective** supports every software development scenario. However, this does not mean that you have to apply all this rigor. Depending upon your project type (green field, CBD, web based, legacy integration, package integration, bought in components, etc. or a mixture) **Select Perspective** helps you select a pragmatic sub-set, which can be adapted to your own organization. This pragmatism is the key to **Select Perspective's** success. A non-academic approach, based on real world projects is the only way to hit the ground running.

A CONTEMPORARY PROCESS FOR TODAY'S DEVELOPMENT

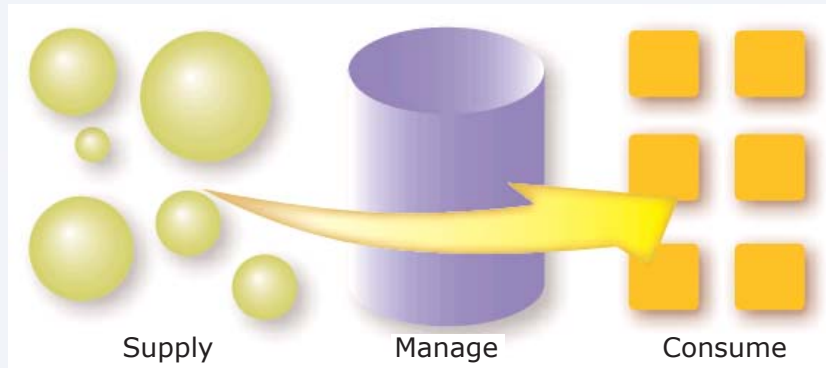

Many software development processes stay too closely tied to their roots, making them inflexible and hard to apply to modern software architectures. Waterfalls, Object Orientation (OO), structured methods, RAD and 'V' models are prevalent in many so called "contemporary" development processes. Today, **Select Perspective** is based upon the real projects, real world concepts of business focus, iterative increments and 'Supply, Manage and Consume' (SMaC). This not only ensures you build the system right but, more importantly, that you build the right systems for the business.

Fast

It is this firm focus on software component/service suppliers, managers and consumers, which makes **Select Perspective** uniquely suitable for any size of development project. From one or two developers in a single office, to hundreds of staff on multiple sites, in different countries with managed outsourcing and parallel development, **Select Perspective** has the flexible power to improve your working practices and productivity, whatever type of project you are working on.

Select Perspective is easy to adopt. Through its minimal set of key deliverables and hierarchy of documented process workflows, a staged migration from your existing development process is straightforward. To reduce the pain even further, your existing best practices can dovetail into **Select Perspective**, giving you a software development process which suits the needs of your business precisely and much more quickly than designing your whole software development process from scratch.

APPLY THE SELECT PERSPECTIVE

So whether you are building web services using XML, component-based systems or applying any of today's software and architecture technologies, take advantage of all our experience and short cut your software development projects. Don't forget to put the **Select Perspective** in your kit bag.

ROLLOUT THE SELECT PERSPECTIVE WITH SELECT PROCESS DIRECTOR

In its own right, **Select Perspective** is an incredibly powerful software development process. When deployed with **Select Process Director™**, its power is placed in the hands of every team member. Not only will **Select Process Director** help you implement **Select Perspective** it actually allows you to quickly adapt it and roll it out, based upon your organizations skills and existing best practices.

To find out more about how **Select Perspective** can help you deliver your business critical software solutions faster and cheaper than ever before visit www.selectbs.com, refer to the companion data sheets or contact us with one of the following numbers.

About Company

Select Business Solutions, a Gores Technology Group portfolio company (www.gores.com), is a leading international software company with customers drawn from the Global 1000.

Select provides comprehensive solutions consisting of pragmatic tools and services, for business critical IT software development, deployment, management, information access and enterprise reporting. Headquartered in Boulder Colorado, Select operates sales offices throughout North America and Europe, in addition to a network of international distributors.

Select Business Solutions' mission is to improve our customers' productivity by providing comprehensive solutions consisting of pragmatic tools and services for business critical software development, deployment and management, as well as information access.
