

UltraQuest Administrator Workshop

UQ50

Component:
**- UltraQuest (includes
the Reporter, Library,
and Applications)**

Audience

This workshop is intended for personnel who are responsible for configuration and administration management of the UltraQuest Product. It is recommended for systems programmers, applications administrators / managers, and user support staff

Format

Workshop 2-3 days
Onsite Only

Prerequisites

- None

server being used by the customer.

Objectives

Upon completion of this workshop, the features of UltraQuest should be configured at the customer site. Workshop participants will have a working knowledge of how the features are configured and be able to manage and maintain the UltraQuest Product. The students learn how to understand, configure and test the following features:

- Server and session modes
- The UltraQuest Catalog
- E-mail
- Batch (private and central)
- Multiple printer destinations for output
- Alerts
- Held Output
- The UltraQuest Library Database
- Publishing: menus, requests, links, groups, users
- User exits
- User identity switching
- Considerations for accessing different data sources

Course Summary

This workshop is designed to cover those topics and configuration steps that fall in the gap between the systems programmer's basic installation of the product and rollout to and usage by end users.

Much of the administrative information is the same regardless of the server or operating system. Differences are noted accordingly. Thus, the student workbook covers both z/VM and z/OS and different Web or ICOM Servers. The presentation of the workshop at a customer site will concentrate only on the operating system and
